

Conformity review v21

After the two cuts, the data-section work, the new Introduction and the executive summary.

53 pages, 0 **errors**, 0 **undefined references**, worst overfull 1.17 pt. Body 8,272 + 34 title words = 8,306 **of** 8,800.

Held: Models A and C, and every Bayesian result. All thirty-one lecturer points listed.

1. What changed since v19

Change	words	Effect
New §1 Introduction	+254	Motivation without formalism, then a roadmap naming all thirteen sections and the appendices, built on eleven <code>\autoref</code> calls so renumbering cannot break it.
Executive summary written	0	378 of the 400 cap, outside the limit. Significance and impact are separate labelled paragraphs. An 80-word placeholder holds the results sentence.
§2 <i>Evolution of Forecasting</i> cut	−103	The new Introduction carries that motivation now.
§6 identification paragraph cut	−89	Appendix B gives the argument in full; the body keeps the ten-site bar.
§7 renamed <i>Signals and Data</i>	+2	
§7 photovoltaic paragraph	+113	Provenance, six channels, one-minute cadence, CET, raw values — plus the sentence that it is the application domain and not an experimental corpus.
Net	+177	Body 8,129 → 8,306 including titles.

2. Coursework brief

#	Required		State
1	Tokenisation as an operator; indistinguishability	met	§3 defines $\mathcal{T}_{P,S}$; §4 derives injectivity and its failure.
2	f_s , P , S , f ; the locking class	met	§4, both branches, union as $\mathcal{F}_{\text{lock}}$.
3	Semantic layer via ontology	met	§5 and Appendix A, with the observability rules linking aliasing to domain concepts.
4	Falsifiable hypotheses (i)(ii)(iii)	met	§6: H1, H2, H3, H3 split into H3a/H3b, each with a refuting posterior and a rule.
5	Controlled synthetic experiments	met	§8 and Table 4, tiling truncation disclosed.
6	Behavioural and representational	met	Models A and B. Strengthened once the Appendix F per-stage reading lands.
7	Bayesian analysis with priors	held	Everything specified; only the posteriors missing.
8	One mitigation, principled	partial	Geometric argument complete; verdict is the red placeholder in §10.
9	Agentic AI: represent/monitor/explain/act	met	§11.
10	NIST AI RMF	met	§12, four functions in prose, register mapped, residual column.

3. Handbook and *Notes on Research and Writing*

Rule		State
Word limit	met	8,306 of 8,800. Projected finish 8,844; the cut plan offers 470 against the 44 needed.
Executive summary ≤ 400	met (new)	378 words, Lorem ipsum gone.
CC-BY, MIT, AI disclosure	met	Correct appendix reference since v18.
Introduction	met (new)	Now a section in its own right, with the motivation the <i>Notes</i> ask for and no formalism.
— roadmap	met (new)	The third paragraph names every section and the appendices.

Rule		State
Background	met	§2, which is what <i>Introductory Notes</i> always was.
Methodology	partial	§8. The “ what will not be discussed ” statement is still not pasted; it is written and waiting in <code>METHODOLOGY_SCOPE.md</code> .
Results	held	§9, 174 words, blocked on the fits.
Discussion	open	Still absent as a section. With §13 Conclusions now present, the cheapest close is one paragraph folded into it rather than a new section.
Conclusions	met	§13, 258 words.
Two-or-more subsections	met	Clean.
≥ 50 words per float	met	Clean; no float has zero references.
Section lead-ins	partial	Only §8.3.2 still opens on % TODO: DESCRIPTION OF BAYESIAN APPROACH.

4. Lecturer comments — Deliverable 1, first round

	Comment		State
A1	Domain before purpose	met	Appendix A orders them so; the body gives domain framing before the objective.
A2	Shorten intended audience	met	Section removed entirely.
A3	Significance and impact, after the out-line	met (new)	The executive summary’s second and third paragraphs, written as explicit significance (“ <i>a property of the configuration, not of the data</i> ”) and impact (“ <i>patch geometry becomes a deployment parameter</i> ”). This was partial in v19.
A4	A dedicated data section	met (new)	§7 is now <i>Signals and Data</i> . It covers all four sources, describes the photovoltaic dataset properly for the first time — provenance, six channels, one-minute cadence, CET, raw values — and states the division of labour with the appendices explicitly. This is “met as scoped”: the generation detail stays in Appendices C–E, which is where it belongs and what the word limit requires.
A5	Explicit mathematical formulation	met	§3 and §4.
A6	Hypotheses as H1/H2/H3	met	§6.
A7	MDL probing specifics	partial	(a) ten states named, (b) prequential codelength in bits, (d) thresholds in §6 — all met. (c) comparing decoder layers is still open , and the Appendix F plan closes it. This is the last A-series item that needs work rather than a decision.
A8	Pipeline ending on the PV data	declared	The experiment is not run and will not be. §7 now states the photovoltaic set is the application domain and “ <i>not an experimental corpus: no hypothesis is tested on it</i> ”. The scope paragraph will repeat it in the methodology. A declared boundary rather than a silent gap.
A9	Retraining, faithful recipe	met	§8 and Table 12, with both departures flagged.
A10	Strides both sides of 16	met	8, 12, 16, 20, 24, 32.
A11	Describe the priors	met	Table 1 plus the sensitivity ladder.

5. Lecturer comments — Deliverable 1, second round

	Comment		State
B1	Decoder vector is not [REG]	met	Appendix B states it; no file contradicts it. The Appendix F stage table will restate it.
B2	Bayesian model must test H2 and H3	met	Models C, D1, D2, each with its own estimand and rule.

	Comment		State
B3	Normalised frequency / cpp, and the PV mapping	partial	Units defined in §4; mapping worked in §8, §12 and §5. Unchanged: no <i>reported</i> quantity uses them — band, tolerance, κ_F and every axis remain in hertz.
B4	Weakness vs exploitable vulnerability	met	All five elements labelled in §12: capabilities, surface, telemetry, consequence, residual risk.
B5	Phase-locking vs structural aliasing	met	§4, in his two-part form.
B6	$P = S = 16$ baseline status	met	Consistent in four places.

6. Lecturer comments — Deliverable 2

	Comment		State
C1	“patch null” misleading	met	Gone from every included file. Survives only in <code>tables/patchStride.tex</code> , which nothing inputs. Delete it.
C2	Soften necessary/sufficient	met	His wording, §6.
C3	Integer sweep vs non-integer locks	met	§8 states the scan resolves a neighbourhood, not the site.
C4	$(L - P) \bmod S = 0$	met	Disclosed with L , L_{tok} , r in Table 4.
C5	Context length per (P, S)	met	Table 4 and Appendix F’s 504/500 with their spacings.
C6	“flat segment” wording	met	His formulation.
C7	Rollout accumulates error	met	Named, both readings identified.
C8	PCA limitation	met	Appendix F, both limitations stated.
C9	H1 from recovery and MDL	held	Held with Model A. Five files still carry the previous estimand; three print.
C10	Security claims conditional	met	Every scenario conditioned on an estimand; register returns <i>Not yet evaluated</i> .
C11	Sign of δ_O	held	Held with Model A.
C12	Conclusions provisional	met	Fail-closed paragraph, §8.
C13	Single seed	met	§8. The scope paragraph will reinforce it.
C14	Deterministic vs learned	met	§8: token collapse “ <i>would appear in an untrained network</i> ”.

7. Tally

	met	declared	partial	held	total
Deliverable 1, first round	9	1	1	—	11
Deliverable 1, second round	5	—	1	—	6
Deliverable 2	12	—	—	2	14
Total	26	1	2	2	31

Twenty-five were met at v19; A3 and A4 moved to met this round, A8 moved to declared. The two remaining partials are **A7(c)**, which the Appendix F plan closes, and **B3**, which would require restating results in cycles per patch and is the only outstanding comment with no cheap answer. The two held items resolve with Models A and C.

8. What is left

1. **Paste the scope paragraph** from `METHODOLOGY_SCOPE.md`. 62 words; closes the *Notes* methodology rule and reinforces A8 and C13.
2. **Build the Appendix F per-stage subsection**, per the separate plan. Closes A7(c) at zero body cost.
3. **Write the §8.3.2 opening**, replacing the last non-fit TODO.
4. **Take cut 1 of the budget plan** (80 words from §12.4). Cheapest way back under the limit, and the duplication it removes is one this week’s Conclusions section created.

5. **The §12 branch sentence.** Still reads “*thins the patch branch, and consequently the stride branch*”, contradicting §10 and §12’s own closing. One line, once you decide the sense.
6. **Delete** `tables/patchStride.tex`.
7. **Consider one Discussion paragraph** folded into §13, to close the last *Notes* structural gap.
8. Then §9, §10.3, §12.2, the summary placeholder and the five Model A references, when the fits land.
